### Laboratory Design & Build

## **THE ORGANIZATION**

Founded in 2010, Ultragenyx is a biopharmaceutical company with a commitment to bring patients novel products for the treatment of rare and ultra-rare diseases, with a focus on serious, debilitating genetic diseases.

## **THE PROBLEM**

Ultragenyx acquired a gene therapy company back in 2017. In the negotiation process, they vowed to preserve the original building facilities from the acquisition. Two years later, a contact of our sales reps reached out to OnePointe Solutions to see if we could help them in the expansion of their analytical laboratory.

The laboratory was for the GMP test release of gene therapy products, which they believed was a very important investment. They enjoyed working with our sales reps from a previous project and knew we would be able to get the job done right.

### Laboratory Design & Build

## THE PROJECT

This was a 3-Part install originally planned as one. The landlord gave an unfortunate time frame to get the installation completed (5 PM – 1 AM).

Our installers had to unload across the street of the facility, drive the equipment over, and carry it up two flights of stairs. The installation started and stopped over the holiday season. It was completed and ready for use in 4 weeks, no punch list afterwards.
