Drying Racks

Drying racks are a great way to dry or drain lab materials. They can be wall-mounted, attached to a work station or hung over a sink. At OnePointe Solutions we offer two materials for your drying rack needs: stainless steel and epoxy resin.

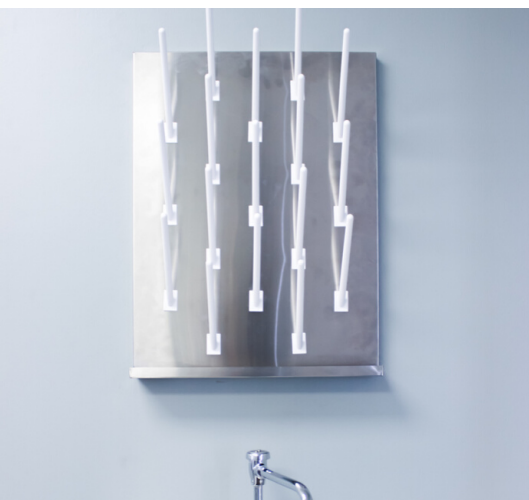

Stainless Steel

Our lightweight stainless steel base boards combined with polypropylene pegs create a sturdy and reliable drying rack for small and medium sized lab containers. This provides an easier installation over heavy options like phenolic or epoxy resin.

Epoxy Resin

Epoxy resin drying racks with polypropylene pegs are positioned for optimal drainage. Due to the fiber-reinforced nature of epoxy resin pegboards, they are especially strong but are heavier to install.
